Indiana limestone is a natural product. Subtle variations in color and texture do occur and are part of what makes this natural stone unique and attractive. We cannot guarantee an exact match to any of the photographic images contained in this guide. Indiana Limestone Company’s continuing attention to product improvement requires that product specifications, technical information, and availability are subject to change without notice.

Indiana Limestone Company

Built On Excellence and Innovation

Indiana Limestone Company is unmatched as the only fully integrated supplier of Indiana limestone. From raw block, slab material, and standard building products, we are a leading supplier of the nation's building stone. Since our founding in 1926, we continue to be the largest limestone quarrier and fabricator in the United States. At Indiana Limestone Company, our strength is in our reliability as we consistently provide high quality products and services to meet your needs.

An Extensive Inventory of Remarkable Natural Stone

Over 85 years ago, a group of visionaries representing 24 limestone companies, or 90% of this area's stone industry, combined virtually an entire industry into one entity: Indiana Limestone Company. Today, our company carries on that tradition. Located in the heart of one of the world's richest limestone deposits, we own more than 4,500 acres that contain over 300 years of reserves.

Our extensive inventory offers the widest range of colors, grades, and products all readily available for quick delivery around the world.

We combine modern technology with traditional craftsmanship to make the architect's vision a reality. The size of our operation has allowed us to pursue both large and small construction and restoration projects, including some of the most prestigious works of American architecture – the Empire State Building, Pentagon, Yankee Stadium, 15 Central Park West, and National Cathedral – along with 36 of the 50 state capitol buildings.

Quality Customer Service

We take pride in the customer focused service we deliver. Our foundation is built upon the skill and dedication of the people at Indiana Limestone Company, as we bring the highest quality natural resource to you. Contact us today for samples and information on how to specify Indiana limestone for your next project. Choose Indiana Limestone – a remarkable raw material that will endure for generations.
The strength of the Indiana Limestone Company is consistently providing reliable and innovative building solutions. Investments in technology have allowed us to continually be the largest limestone quarrier in the United States with the highest quality stone reserves. Focusing on efficiency, quality and, above all, safety every step of the way, we extract more than 6 million cubic feet of limestone each year. These technological investments and owning the raw material supply have lead to faster production to better meet your project and stocking needs.

Indiana Limestone Company’s vision and mission has evolved from a quarrier to a vertically integrated high-end building products company. Our two signature product lines are the Urban Hardscapes and Estate Veneer Series. Our veneers, Vanderbilt Classic®, Berkshire™, and Rockford Estate Blend®, offer timeless accents and durability to residential, institutional, and commercial projects. Our Urban Hardscapes products, which include pavers, wall caps, pier caps, pool coping, garden wall, and steppers, offer an expansive product line for dealers.
YOUR VISION DESERVES LIMESTONE

Since 1926, we’ve seen numerous trends in the building products industry and have helped thousands reach their vision. At Indiana Limestone we want to continually provide you the knowledge and resources that give you inspiration and help bring your vision to life. We believe your vision deserves limestone. See the benefits of Indiana Limestone for yourself and get inspired for your next project.

**Natural Beauty**
A one-of-a-kind building material, natural stone’s breadth of color and texture offers a unique and unmatched aesthetic.

**Consistency**
Indiana Limestone offers an unmatched consistency, which is unique amongst natural stone products. Lesser materials have come and gone, while Indiana limestone has been in use for more than 160 years.

**Complementary**
Natural products add value to everything from brick to granite to wood in both traditional and contemporary environments.

**Versatility**
Limestone offers nearly unlimited application opportunities. For example, limestone pier caps can be used as base caps for columns. Limestone sills can pitch two ends to form a mantel or act as a hearthstone for an outdoor living space. The only limit is your imagination.

**Durability**
Outdoor hardscapes need to weather the elements. Landscapes built with limestone decades ago are still in use today, including the grounds of the Biltmore House in Asheville, North Carolina, and Longwood Gardens in Philadelphia, Pennsylvania.
Your Vision Deserves Limestone

Low Life-Cycle Costs
Indiana Limestone is low-maintenance, requiring only the occasional re-pointing of stone joints and cleaning, if desired.

High SRI Ratings
Test results show limestone has high ratings for solar reflectance index (SRI), which measures the ability of a constructed surface to reflect solar heat. This means sustainable residential landscape design with limestone can increase environmental health as a low-impact material.

Reflective materials help reduce air temperatures in cities that deal with the urban heat island effect.

Recyclable
Indiana Limestone can be taken from one project and reused on another, as elements in another building, landscape stones, in perimeter walls, or even as site fill.

Cost-Effective
Standard products are less expensive than full-custom products at a fraction of the lead-time. They also help to standardize installation requirements and more accurately predict labor estimates.

The beauty of limestone is that it offers unmatched versatility and durability to fit perfectly into the dream space your clients want.

### Notes

These products are used to the best advantage when the variations of grain and natural characteristics are allowed to complement the stone color and jointing pattern.

When Rockford Estate Blend® is used in a random pattern, it is suggested that no vertical joint in the pattern be higher than the highest course height being used, no horizontal joint be more than three stones long, and that no stones the same height be placed end to end.

Refer to your price guide or contact Indiana Limestone for color, grade, and texture availability.

*Nominal depth is indicated because of inherent variation in depth with a broken and tumbled product. Depths will vary between 3/4” (19.05mm) to 1-1/4" (31.75mm). Corners include returns to mimic full-bed-depth products. Return depth on corners is between 3" (76.20mm) and 4" (101.60mm).

**Notes**

These products are used to the best advantage when the variations of grain and natural characteristics are allowed to complement the stone color and jointing pattern.

When Rockford Estate Blend® is used in a random pattern, it is suggested that no vertical joint in the pattern be higher than the highest course height being used, no horizontal joint be more than three stones long, and that no stones the same height be placed end to end.

Refer to your price guide or contact Indiana Limestone for color, grade, and texture availability.
Estate Veneer Series Berkshire™

Berkshire™ is a solid, genuine, natural Indiana Limestone split face veneer. The variation of height courses creates a classic and pleasing random definition for both commercial and fine residential structures.

Available in Thin and Full Bed Veneer.
Berkshire™ Full Bed Veneer

**Notes**

Berkshire™ is defined as “semi-dimensional” and is furnished in random lengths for job site fittings.

These products are used to the best advantage when the variations of grain and natural characteristics are allowed to complement the stone color and jointing pattern.

When Berkshire™ is used in a random or ashlar pattern, it is suggested that no vertical joint in the pattern be higher than the highest course height being used, no horizontal joint be more than three stones long, and that no stones the same height be placed end to end.

Refer to your price guide or contact Indiana Limestone for color, grade, and texture availability.

Sill Stock

Estate Veneer Series Sill Stock

Estate Veneer Series Sills add an accent band to any residential or commercial window project. Choosing Indiana Limestone sills add a timeless complement to your design. Available in both gray and full color blend, you can select between a smooth or rock face finish to match the architectural style you desire. Indiana Limestone sills are produced as a simple rectangular shape.

They are available in three standard course heights of 2-1/4”, 3”, and 4”. We offer standard sill depths from 4-1/2” to 24”. Each sill comes jointed to a standard length of 4’, 6’, or 8’. Estate Veneer Series Sills are offered with smooth edges or rock face along one long edge. A drip edge can also be added as needed.

Notes
Indiana Limestone thin veneer sills are rapidly becoming a product of choice for use with all types of full bed and thin stone veneers. Our thin stone sills provide the perfect finishing touch for any thin stone veneer project. They provide a clean finish and can be used to add dimension and depth to your next project.

Refer to your price guide or contact Indiana Limestone for details on lengths, color, grade, and texture availability.
Delivery, Storage, and Handling
- Product will be supplied adequately packaged on pallets or timbers to keep finished stone clear of the ground.
- Storage area should be a well-drained space, graveled or chipped for protection against mud splatters.
- When using pry bars to move stone into place, use padding to protect the edges of the stone.
- Product should be unloaded and handled carefully to prevent breakage.
- Product should be handled carefully to avoid chips and scratches.

Cleaning
- After mortar has set, the limestone should be brushed down with a stiff fiber brush, then carefully rinsed with clear water to remove any accumulation of stain or matter foreign to the limestone.

Protection of Base Courses and Unfinished Work
- To avoid possible unsightly stains caused by mud or other splashing, the ground at the base of the structure should be covered with protective material during construction. This should be left intact until landscaping is complete.
- During construction, tops of walls should be carefully protected to prevent rain, snow, or seepage from entering space between veneer and backing.

Anchors
- Anchors should be attached securely to wood/metal framing or masonry backing. Use of stainless steel anchors is recommended. These ties should be spaced approximately 24” vertically and 18” horizontally.
Setting Stonework
- Stone shall be set in strict accordance with approved profile and jointing pattern. Joints shall be 3/8” wide for veneer and trim.
- Thin veneers can be applied over poured-in-place concrete, precast, tilt-up wall panels, CMUs, or over framed wood or metal stud walls with sheathing.

Refer to the Indiana Limestone Company Thin Veneer Installation Guide for details on use over multiple substrates.

Code Required Accessories
- Dependent on installation substrates and local code requirements, your installation will include some variant on:
  - Corrosion resistant weep screeds, flashing, and weep vents
  - Corrosion resistant casing beads
  - Water/Air/Vapor Barrier within the wall assembly
  - Drainage mats and furring strips

Lath and Lath Fasteners
- For natural stone adhered veneers, use a minimum of 3.4 lb/sq ft expanded metal galvanized diamond metal lath conforming to ASTM C1063-15.
- Use corrosion resistant fasteners that conform to ASTM1063.
- Fasteners must penetrate wood studs 1-1/4” minimum and 3/8” minimum on metal studs.

Refer to the Indiana Limestone Company Thin Veneer Installation Guide for additional details.

Mortar
- Use polymer-modified, non-staining, sag-resistant Type S (ASTM C270) stone veneer mortar for both scratch coat and setting bed.

Refer to the Indiana Limestone Company Thin Veneer Installation Guide for additional installation guidance.

Diagram of Thin Veneer Installation
URBAN HARDSCAPES

Create your dream design.

An outdoor living space has unlimited uses and locations, including residential, commercial, private, and public.

Indiana Limestone is proud to introduce Urban Hardscapes products, a diverse and beautiful landscaping line designed with your future in mind. Urban Hardscapes will add a touch of reverent beauty to any landscaping dream you have. Cool to the touch and extremely versatile, Urban Hardscapes can be used for a vast array of outdoor projects.
Indiana Limestone fits YOUR style

Bridging traditional and contemporary styles, Urban Hardscapes products are crafted in our mills in Southern Indiana and serve a broad spectrum of applications.

Need something custom? The Indiana Limestone Company has a broad list of partner fabricators that can meet your needs.

SPECIALTY FINISHES

New specialty finishes can add drama and sophistication to your next natural stone project. Indiana Limestone is proud to offer three new stunning specialty finishes for pavers and treads. Each offers a distinct look and feel, combined with the unique natural beauty of Indiana Limestone.

- **Bush Hammer**
  A rough, pockmarked texture that resembles naturally weathered rock.

- **Sandblast or Abrasive**
  A smooth abrasion, which leaves the material with a slightly scratched (but not rugged) surface.

- **Wire Brush**
  Uses a coarse rotary wire brush that simulates natural wear over time.
PAVERS

Urban Hardscapes by Indiana Limestone Pavers offer the same striking surface textures that Indiana Limestone products are known for in paving stones for patios, walkways, and pool decks. Unlike other pavers, the color and composition of Indiana Limestone pavers will stay cool to the feet in the summer sun. Available in our original slab formats, new unit paving sizes, and on-trend plank sizes, we manufacture the broadest portfolio of standard Indiana Limestone pavers to help you design your vision.

APPLICATIONS

Walkways  Pools  Patios

3-size modular pattern paving in the Modesto paver pattern.
Slab Pavers

Many patterns of our limestone pavers can be produced for you from our original 11 standard sizes. These sizes range from 12” x 12” to 24” x 36” and are available in the natural full color range of Indiana Limestone.
3-size modular pattern paving in the Modesto paver pattern and Vanderbilt Classic® thin veneer with treads.
24" x 24" standard size pavers.
Small Format Pavers

Small format Indiana Limestone pavers are a great fit for residential applications. Our popular pavers are now available at half the current scale, allowing you to design more appropriately for smaller spaces. The addition of nine new SKUs gives you the ability to combine large and small format sizes for maximum versatility. Easily integrated with our slab sized paver line and combined with other products from Urban Hardscapes, small format pavers echo the beauty of natural Indiana Limestone. The only limit is your imagination.
Plank Pavers NEW

An on-trend, long-length, dimensional paving solution, Indiana Limestone plank pavers offer a contemporary look and feel. The versatility of our plank pavers allow landscape designers to work in a broader range of styles. Indiana Limestone plank pavers are available in three sizes and two thicknesses giving you enhanced designability and the ability to accommodate for different installation specifications.

Plank pavers in running bond pattern with pool coping.

PLANK PAVER PATTERNS

Running Bond Pattern
A pattern where the stone is set side by side, but instead of setting stone directly above each other, they are offset just slightly.

Herringbone Pattern
A pattern comprised of rows of parallel lines which in any two adjacent rows slope in opposite directions. The stone can be rectangles or parallelograms.

Stacked Bond Pattern
A pattern where the facing stone is laid with all vertical joints aligned.
Paving Patterns

CHOOSING A PATTERN
Indiana Limestone pavers can be installed in a multitude of different patterns and combinations. Keep it simple by selecting a pre-configured pattern from Urban Hardscapes. Design your own or keep it simple with our pattern pavers conveniently palletized with a mix of three sizes to accommodate even the smallest projects - now available in a new smaller format option. For more information, patterns, and inspiration, please visit www.IndianaLimestoneCompany.com.

MODULAR 3-PIECE PATTERNS

Modesto  Highpoint  Chesapeake

Design Your Own Patterns With Our Standard Sizes
Design inspiration can come from many places. Whether it’s from a picture or visiting a home and garden show, knowing how to create your own patterns with standard sizes is essential in helping to make your design vision come to life.

Determining the Ratios
If your paving doesn’t come in the sizes of the pattern by which your customer is inspired - re-design it with standard sizes. Take the smallest square in the pattern as a base unit size, and create ratios to all of the other sizes (how many of the small unit it would take to make the other sizes). Then, apply this logic to all of the sizes in the pattern. In a typical French pattern, the smallest size is 8” x 8” - all other sizes are based on multiples of 8”.

• An 8” x 8” paver would be 1 Unit by 1 Unit in that example.
• Another size in that pattern is 16” x 24” which would be 2 Units by 3 Units.

Selecting the Right Sized Paving to Make the Pattern
As long as the pavers you select have sizes available in the same ratio - you can achieve the same aesthetic with other sized products. The natural stone option referenced above can be used to lay the same pattern, but in a larger format.

Example:
• Dimension: 11-5/8” x 23-5/8”, Ratio: 1/2 Unit by 1 Unit
• Dimension: 23-5/8” x 23-5/8”, Ratio: 1 Unit by 1 Unit
• Dimension: 23-5/8” x 35-5/8”, Ratio: 1 Unit by 1-1/2 Units

Broader Application
Knowing these basic principles - you can apply them to any pattern. Below is a traditional French pattern that has been scaled up to accommodate larger format pavers. Converting the smallest size to 12” x 12” and using multiples of twelve delivers the same pattern and overall aesthetic in a larger format.
## Pavers

*Please note that thickness indicated (depth) is the actual thickness where length and width are nominal thicknesses. All of our paving is designed to feature a 3/8" joint line. Actual dimensions of a 12" x 12" (304.80mm x 304.80mm) nominal paver are 11-5/8" x 11-5/8" (295.28mm x 295.28mm).*

### Notes

Refer to your price guide or contact Indiana Limestone for color, grade, and texture availability.
Installation

Indiana Limestone pavers can be set in mortar or over compacted aggregate. The following installation methodologies have been tested for use in residential, pedestrian applications only. Installation details may need to be modified for commercial applications, to conform to local building regulations or use alternative and locally available aggregate materials. Consult with a landscape architect, installation professional, or engineer regarding your commercial projects or if specified installation materials are not available in your area.

Setting over Mortar

Setting Bed

Use of Type N Masonry Cement is highly recommended for the setting bed cement mix. White Cement does not contain the chemicals that can cause unsightly staining when activated by water. Typical fine sand will be adequate for the cement mix. A setting bed depth of 1” to 1-1/2” is recommended.

Concrete Slab

The concrete slab should be cured; 30 days of curing would be ideal.

Grouting of Joints

Grouting or pointing of the joints can be done with the same Type N White Masonry Cement (mixed with White Sand to allow for accurate coloring).

Cleaning

After mortar has set, the pavers should be brushed down with a stiff fiber brush, and then carefully rinsed with clear water to remove any accumulation of stain or matter foreign to the limestone.

Setting over a Compacted Base

Drainage, Grade, and Base Preparation

When excavating it is important to achieve a slope in increments of 1.5% (3/16” per ft./5mm per 300mm). Excavation should mirror the final grade of the pavement. Grading or soil for drainage should be away from a home’s foundation.

If the soil is granular or sandy, it should be compacted with a vibrating plate. Modify clay-like soil with a blend of lime and crushed stone prior to compaction. Cover compacted soil base with a geotextile fabric to prevent the contamination of the base with the crushed stone base.

Standard “Sand Set” Foundation

Install a 0-3/4” (0-20mm or No. 78 stone) base in 4” lifts with a minimum of 5,000 lbf (22 kN) vibrating plate compactor to a height adequate for your base soil type.

- For Clayey or Silty soil make the foundation 6” to 8” of material.
- For Sandy or Gravelly soil, make the foundation 4” to 6” of material.
- The base should extend beyond the finished edge of the design by an extra width equal to the foundation thickness.

Notes on Indiana Limestone Material:

Indiana Limestone is a natural stone with color variations within the deposit. If you are installing multiple pallets of material on the job (same or different sizes) it is important to pull material from multiple pallets to ensure the optimal color mix.

Polymeric sands should NEVER be used with Indiana Limestone paving materials. Indiana Limestone, by nature, is a more porous natural stone. Binding polymers from polymeric sands (even those noted as non-staining and safe for natural stones) have been shown to leech into the stone and cause discoloration that cannot be repaired or removed and will not weather out over time.
Urban Hardscapes by Indiana Limestone Pavers
Installation and Technical Information

For compacting, wet the base material thoroughly and compact with a vibrating plate in all directions. Continue this until you have achieved the desired height. Use a paver as reference. The base tolerance should be +/- 3/8” for every 10’ increment.

Setting Bed
Use a 1” layer of concrete sand as your setting base. Be sure to grade the concrete sand with a straight-edge or by other means. A non-graded subsurface will be evident after installation. Do not compact the bedding sand before pavers are set.

Installation of Pavers
Install pavers on to the setting bed in the shape dictated by the design or pattern required with 3/8” spacing between paver edges. Walk on paving stones while installing them to ensure they stay level when foot pressure is applied. If pavers wobble or are out-of-plane with the surface, remove the paving unit and add additional sand to level.

Paving stones on the edge of a design can be cut using an angle grinder fitted with a masonry blade or a concrete saw. Ensure that the blade used on an angle grinder has sufficient depth-of-cut for your application.

Utilizing a polymer landscape edging is optional but will aid in retaining shape of paved walkways and patio areas. A variety of edging is available. Spikes for the edge restraints must be installed into the compacted foundation and not the soil.

Filling in Joints
Select your material for fill between stones. Concrete sand is sufficient, decomposed granite is also an option. If using decomposed granite – do not use decomposed granites with resins or stabilizers.

Reminder: Indiana Limestone does not recommend the use of polymeric sand with our paving products based on understanding of current products. New products are brought to market consistently - refer to manufacturers recommendations and test compatibility before completing a project installation.

Spread out your selected fill material and sweep in between joints in all directions.

Sweep once more and remove excess sand or decomposed granite.
GARDEN STEPPERS

Urban Hardscapes by Indiana Limestone Garden Steppers lend a sense of weight and permanence by creating step elements from single pieces of Indiana Limestone. Our steppers add an inviting touch to any landscaping area.

APPLICATIONS

Steps  Patios

Popular Sizing

Urban Hardscapes by Indiana Limestone Garden Steppers come standard with a split front, back, and ends, and sawn top and bottom. Each step is 6" tall and 16" wide, and is available in lengths of 3’, 4’, and 5’.

GARDEN WALL

Urban Hardscapes by Indiana Limestone Garden Wall can add depth to any space. A dry-stacked, non-retaining product, it is perfect for shallow floral beds and landscaping elements. Available in 3” and 6” heights, it is cut on-site to achieve a broad variety of looks. Use the 6” height in a bonded pattern for a more massive, monolithic look. Use 3” height in longer lengths for a more contemporary look.

APPLICATIONS

- Walls
- Patios
- Mailboxes

3” and 6” ashlar pattern for a more dynamic look.

6” height in a bonded pattern for a more massive, monolithic look.

3” height in longer lengths for a more contemporary look.

3” and 6” ashlar pattern with a rock face wall cap.

To order or for Dealer information, call 800.457.4026 or visit IndianaLimestoneCompany.com

Please note that garden wall is supplied in random lengths, but nominally at approximately 41” (1041.40mm) long. This product is sold by weight and is supplied stacked on the pallet with front and back broken faces. Ends may be broken or belt sawn.

Notes
Refer to your price guide or contact Indiana Limestone for color, grade, and texture availability.
TREADS

Urban Hardscapes by Indiana Limestone Treads are a mainstay for stone step treads across North America. Indiana Limestone has been used extensively as step treads, mantels, hearths, and copings. All are available in a standard thickness 2" and 2-1/4", a 12" depth, and in lengths from 3' to 8'.

APPLICATIONS

Walkways  Pools  Patios

Vanderbilt Classic® thin veneer with treads.

2" treads in lengths of 4'.
Treads

Treads - 2" and 2-1/4" (50.8mm and 57.15mm)

2" tread lengths are nominal lengths. 2" treads are actually 1" longer than stated to accommodate for applications where the sawn edge is exposed and needs to be field dressed or hand pitched.

Diagram of Tread Installation

Notes

Refer to your price guide or contact Indiana Limestone for color, grade, and texture availability. Treads can be made with a pitched, rock face facing edge, or a smooth edge 2-1/4" thickness only. Sides and back are sawn.

To order or for Dealer information, call 800.457.4026 or visit IndianaLimestoneCompany.com
PIER CAPS

Urban Hardscapes by Indiana Limestone Pier Caps are the perfect finish for your vertical application projects. Available in a wide range of sizes with smooth or pitched edges, our pier caps fit whatever you have in mind. They are available in 2-1/4" and 3" thicknesses.

APPLICATIONS

Columns  Walls  Mailboxes

Rock face pier cap.

Square edge pier cap.

Rock face pier cap.

POOL COPING

When you want a beautiful and long-lasting poolscape, look no further than Urban Hardscapes by Indiana Limestone Pool Coping. Our coping offers a unique set of properties that keep it cool to the touch even in direct sunlight, which makes our pool coping desirable when your family is barefoot enjoying the summer.

APPLICATIONS

- Pools
- Patios
- Steps

Pool coping with standard format pavers.

Pool coping with small format pavers.
Pool Coping

<table>

</table>

Our pool coping is a nominal 12" to the arris line (transition the bullnose at the front of the unit).

Notes
Refer to your price guide or contact Indiana Limestone for color, grade, and texture availability.
BOULDERS

Urban Hardscapes by Indiana Limestone Boulders add a strong accent to any landscape design. Often used to delineate spatial elements, Indiana Limestone boulders offer an opportunity for material continuity in accents, as well as designed elements.

APPLICATIONS

- Patios
- Walkways
- Fire Pits

Varied boulder sizes available for large or small scale design elements.

Indiana Limestone boulders are natural stone from our quarries, and vary as a natural material. While images are representative we cannot guarantee that boulders feature weathering, moss elements, quarry drill marks, etc.

Large sized boulder.
Our Urban Hardscapes by Indiana Limestone Benches add an additional appealing component to any landscaping project. These timeless pieces are constructed from a split face top slab with split face legs, both include a sawn finish top and bottom. Pair it with other Urban Hardscapes products, including our patterned pavers, to create a residential or commercial sanctuary!

**APPLICATIONS**

- Patios
- Walkways
- Fire Pits

**Notes**

Benches weigh more than 600 lbs. For installation, it is recommended that benches be set on a concrete pad or compacted aggregate to prevent settling. Consult with your landscape design or installation professional to determine the best base for your Indiana Limestone bench. Indiana Limestone benches meet ADA compliant seating heights.
BLOCKS & SLABS

For over a century, Indiana Limestone Company has been a leading supplier of the world’s finest limestone to fabricators of all sizes. For consistent high quality and immediate delivery, turn to Indiana Limestone Company for select blocks and slabs. Discover more about the benefits at IndianaLimestoneCompany.com.
Indiana Limestone Blocks and Slabs

Indiana Limestone Company provides you with the most consistent, high quality, select Indiana Limestone blocks in the widest range of sizes, colors, and grades for immediate delivery.

Benefits
As a customer, you can count on these outstanding benefits when ordering your raw material from Indiana Limestone Company:

- Immediate availability of inventory on Indiana Limestone block orders.
- Huge inventory of Indiana Limestone available in all grades and colors. A reliable supply of over 10,000 blocks on 90 acres.
- Consistent quality of our Indiana Limestone from 4,500 acres of reserves.
- Marketing materials that support the quality of Indiana Limestone to your end customer.
- New Microsoft Dynamix ERP with computerized block and slab inventory database

Color

**Buff**: Traditional buff color ranging from cream to light brown with some veining and grain movement visible in the face and fine to medium grained stone.

**Silver Buff**: Clean buff color with subtle silver colored veining in the foreground and fine to medium grained stone.

**Rustic Buff**: Traditional buff color ranging from cream to light brown with visible veining in the face and medium to coarse grained stone.

**Full Color Blend**: A natural compilation of the full range of buff to medium gray shades with the same great subtle veining. All of our full color blend is standard grade.

**Gray**: Light to medium shades of gray with some veining and grain movement visible in the face and fine to medium grained stone.

**Old Gothic**: Wide variation of grain density and movement from piece to piece. Within the piece, visible shells, frequent voids and pits (pea to penny size, sometimes larger), some rust, pronounced calcium beds and veining.

**Mavise Stone**: Contains the characteristics and structural integrity of a high-density material with a unique colorization.

Grade

**Select**: Fine grained stone having a controlled minimum of inclusions and veining.

**Standard**: Average to large grained stone permitting an average amount of inclusions and veining.

**Rustic**: Large to coarse grained stone permitting an above average amount of inclusions and veining.

**Please Note:**

- Full color blend material is always standard grade unless otherwise noted.
- Mavise is not a graded material.
- Slabs come with a belt sawn finish only.
Mavise Stone

Discovered in a small 8-acre section in our Victor Quarry, Mavise Stone will take your interior design to the next level with stunning, unique natural stone material. The strong, clean look of real limestone is ideal for your upscale commercial or fine residential design.

**MAVISE**

A unique opportunity to own a limited part of North American history.

Mavise Stone can be manufactured in standard sizes or custom fabricated into a one-of-a-kind product for interior finishes in both vertical and horizontal applications. Indiana Limestone Company Mavise Stone contains the characteristics and structural integrity of a high-density material with a unique colorization. Its rich texture makes it the perfect material for flooring, countertops, or cladding options that will turn heads.

*Because it is so rare, Mavise Stone will only be available for a limited time.*
Lightweight Limestone Panel System

Presenting the Lightweight Limestone Panel System
By bonding a veneer of our distinctive natural material to an advanced honeycomb backing, our Lightweight Limestone Panel System offers cutting-edge possibilities for building, engineering, and architecture.

An Iconic Building Material Enters a New Era of Design.
The unique natural character of Indiana Limestone. Now in a modular panel designed for your current building challenges.

Substantially lighter.
Lightweight limestone panels weigh in at 80% less than solid slabs, which translates to a vastly lighter load - on structures, labor crews, and equipment costs.

Significantly stronger.
Lightweight panels boast 60 times more impact-resistance than the solid slabs from which they are produced. Plus, they deliver enhanced flexural strength and stand up to extreme freeze-thaw cycles.

Intelligently modular.
The predesigned panels are available in standard-sized units, don’t require a complex layout, and install easily. It’s yet another option to make your Indiana Limestone vision a reality.

Visit LightLimestone.com for more information.
SPECIFICATION

& TECHNICAL INFORMATION

Indiana Limestone is a desirable choice for masons, installers, and contractors for residential, commercial, and institutional projects. If you need an installation detail, please contact your Regional Sales Manager IndianaLimestoneCompany.com.
Indiana Limestone
Specification and Technical Information

Properties of Indiana Limestone

Most building designs that incorporate Indiana Limestone consider these properties:

Ultimate compressive strength of dry specimens
Value: 4,000 psi min.* Test STD: ASTM C170

Modulus of rupture of dry specimens
Value: 700 psi min.** Test STD: ASTM C99

Absorption
Value: 7.5 % max. Test STD: ASTM C97

*Most Indiana Limestone products indicate min. values in excess of 4,000 psi, but this value is listed as an engineering reference.

**Wind load and other bending forces are typically calculated at 1,000 psi for modulus of rupture.

NOTE: All Indiana Limestone meets or exceeds the strength requirements set forth in ASTM C568 for Type II Dimension Limestone.

Abrasion Resistance

When used in flooring, paving, or steps, the abrasion resistance should be specified.

Value Range: (Abrasive Hardness)
6 min. to 17 max.† Test STD: ASTM C241

†Stone preparation and installation details are important in assuring hardness of 8 for heavy traffic areas. Specify abrasive hardness of 6 for light traffic areas such as patios, plazas, and wide sidewalks.

Dampproofing

■ Where limestone is to be used at or below grade, dampproofing must be applied.
■ Dampproofing the face of backup or structural concrete is helpful, but is not a substitute for back painting the stone.
■ In cases where limestone is to be covered by soil or paving at grade and where the stones will present an evaporation surface above grade, the dampproofing must be carried up the partially exposed face at least to grade level.
■ Indiana Limestone Company recommends a cementitious based waterproof coating.

Delivery, Storage, and Handling

■ Product will be supplied adequately packaged on pallets or timbers to keep finished stone clear of the ground.
■ Storage area should be a well-drained space, graveled or chipped for protection against mud splatters.
■ When using pry bars to move stone into place, use padding to protect the edges of the stone.
■ Product should be unloaded and handled carefully to prevent breakage.
■ Product should be handled carefully to avoid chips and scratches.

Protection of Unfinished Work

■ To avoid possible unsightly stains caused from dirt or other construction materials residue, the limestone should be covered with protective material during construction. This material should be left intact until the finishing of any surrounding work.
■ During construction, limestone should be carefully protected to prevent rain, snow, or seepage from entering space between keystones and backing.

Cleaning

■ After mortar has set, the limestone should be brushed down with a stiff fiber brush, then carefully rinsed with clear water to remove any accumulation of stain or matter foreign to the limestone.

Custom Fabrication

Our comprehensive portfolio of finished goods can meet your complete project requirements in many cases. When it does not, we can refer you to a custom fabrication partner or help your preferred stone fabricator understand how easy it is to work with Indiana Limestone. Contact our sales staff for a project review and consultation.

Custom residential fabrication.

Commercial needs met with Indiana Limestone.

Custom pier caps and wall caps.
